With regard Claim 1, "if the wideband variance value is greater than the narrowband variance value, comparing the narrowband and wideband variance values to determine a scale factor for the input to the variable gain amplifier." as recited,

With regard Claims 7 and 15, "wherein the wideband variance value is determined from components of the received RF signal across a

bandwidth which is at least twice as wide as a bandwidth of the intended received signal." as recited, and

With regard Claims 8 and 16, "wherein the narrowband variance value is determined from components of the received RF signal across a bandwidth which is less than twice a bandwidth of the intended received signal." as recited, and

With regard claim 9, "a comparator, for comparing the narrowband and wideband variance values to determine a scale factor for the input to the variable gain amplifier." as recited.
